# Learning Targets

St Paul Administrators will be able to...

- Day 1
  - Understand the overall vision and goals of mathematics in SPPS
  - Feel confident around EBP's outlined in their SCIP
- Day 2
  - Familiarize themselves with mathematics instructional strategies, routines, and priorities that support efforts with both MLL and CRI
  - Explore new content written by SPPS teachers in the TQE framework
  - Recognize and own their '6 Spheres of Influence' within the teaching and learning of mathematics in their buildings

# SPPS Math Overview

2020-2021

## **Math Vision:**

**Help SPPS students and staff make sense of mathematics using TQE (Task, Questions, and Evidence)**

# Mathematics Goals

**Destination:** SPPS will improve achievement and address students' social and emotional needs through Culturally Responsive Instruction. We will engage learners in math instruction and encourage a sense of social justice for students, their families, communities, and the world at large. Students will be prepared for and envision themselves in professions of the 21st century. They will be inspired to make the world a better place.

**Stretch Goal:**

Saint Paul Public Schools will increase student achievement in Math by 13.9% on the MCA for the 2020-21 school year.

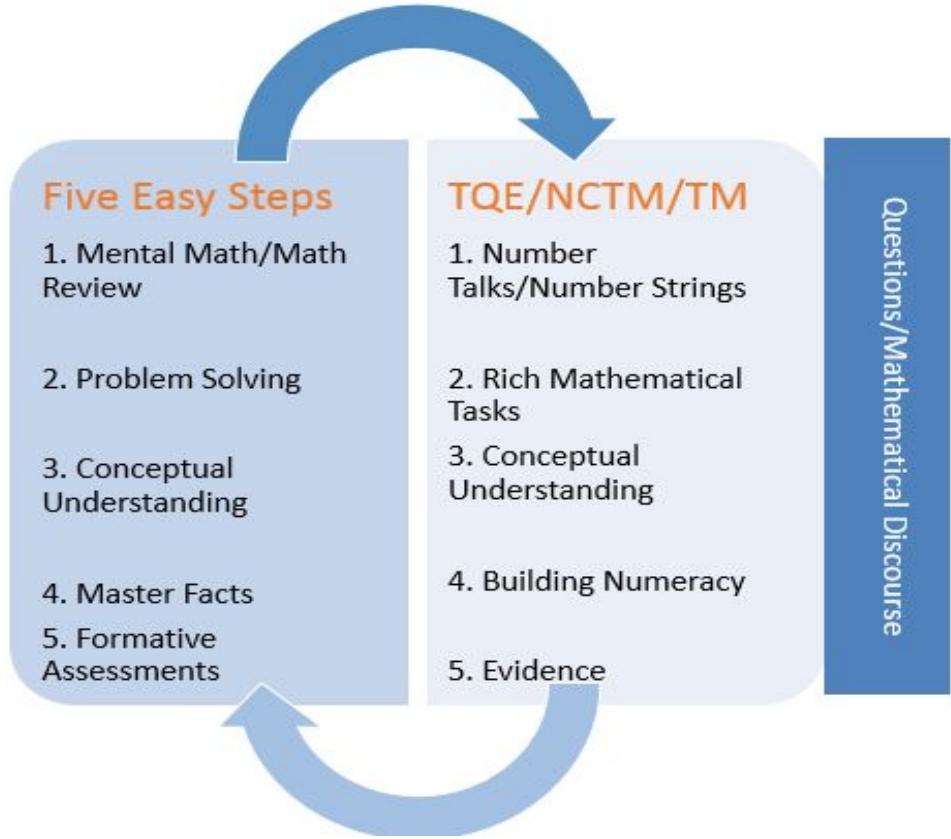

# Mathematics Goals Continued....

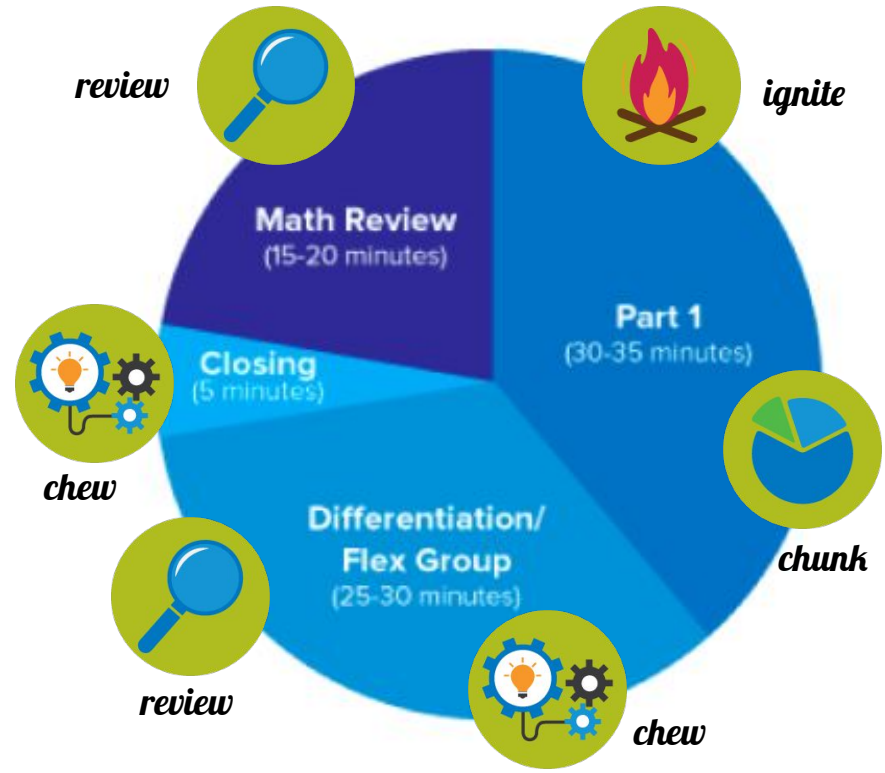

## Smart Goal:

Saint Paul Public Schools will increase student achievement in Math by 1% a year on the MCA starting the 2020-21 school year.

# Culturally Responsive Instruction

## READY for RIGOR A Framework for Culturally Responsive Teaching

© Zaretta Hammond, 2013

[www.ready4rigor.com](http://www.ready4rigor.com)

## Culturally Responsive Teaching:

Culturally relevant teaching is a term created by Gloria Ladson-Billings (1994) to describe "a pedagogy that empowers students intellectually, socially, emotionally, and politically by using cultural referents to impart knowledge, skills, and attitudes." Participating in culturally relevant teaching essentially means that teachers create a bridge between students' home and school lives, while still meeting the expectations of the district and state curricular requirements. Culturally relevant teaching utilizes the backgrounds, knowledge, and experiences of the students to inform the teacher's lessons and methodology.

**It's only culturally responsive if our students are responsive to the strategy, curriculum, or instruction.  
One strategy may be effective and engaging for one student or student group and not another.**

<p style="text-align: center;"><b>Rigor</b></p> <p>In what ways will <u>I</u> message to ALL students that they are expected to attain high standards?</p> <ul style="list-style-type: none"> <li>• All students should receive the consistent message that they are expected to attain high standards in their schoolwork.</li> <li>• Communicate clear expectations</li> <li>• Create an environment in which there is genuine respect for students and a belief in their capacity.</li> <li>• Recognize when standards are met</li> <li>• All students should receive the consistent message that they are expected to attain high standards in their schoolwork.</li> </ul>	<p style="text-align: center;"><b>Relevance</b></p> <p>How will <u>I</u> make sure the curriculum relates to students' experiences, interests and backgrounds?</p> <ul style="list-style-type: none"> <li>• How does the curriculum relate to students' experience, interest and background?</li> <li>• Students identify issues that are important to them.</li> <li>• The classroom recognizes student advocacy for what students need to be successful.</li> </ul>
<p style="text-align: center;"><b>Realness</b></p> <p>What strategies will <u>I</u> use to make sure students and adults are able to show up as their authentic selves?</p> <ul style="list-style-type: none"> <li>• Are students able to show up as their authentic selves?</li> <li>• Do students perceive teachers as authentic?</li> <li>• Students engage in the curriculum critically. They question and inquire about what and how they are taught.</li> </ul>	<p style="text-align: center;"><b>Relationships</b></p> <p>How will <u>I</u> build relationships with staff members, students, and families?</p> <ul style="list-style-type: none"> <li>• How do we build relationships that are reciprocal?</li> <li>• Recognize student contributions to the classroom community and also create an environment where students build relationship with the teachers not just teachers building relationships with students.</li> </ul>

**chunk**

## DIMENSIONS OF EQUITY

As equity-focused educators, it is important to distinguish between three key areas in education: *multicultural education*, *social justice education*, and *culturally responsive teaching*. Too often the terms are used interchangeably when they are not. Below is a simple chart to help you understand the distinctions between them. A key point to remember, only CRT is focused on the cognitive development of under-served students. Multicultural and social justice education have more of a supporting role in culturally responsive teaching.

<b>MULTICULTURAL EDUCATION</b>	<b>SOCIAL JUSTICE EDUCATION</b>	<b>CULTURALLY RESPONSIVE PEDAGOGY</b>
Focuses on celebrating diversity	Focuses on exposing the social political context that students experience	Focuses on improving the learning capacity of diverse students who have been marginalized educationally
Centers around creating positive social interactions across difference	Centers around raising students' consciousness about inequity in everyday social, environmental, economic, and political aspects of life	Centers around the affective & cognitive aspects of teaching and learning
Concerns itself with exposing privileged students to diverse literature, multiple perspectives, and inclusion in the curriculum as well as help students of color see themselves reflected.	Concerns itself with creating lenses to recognize and interrupt inequitable patterns and practices in society.	Concerns itself with building resilience and academic mindset by pushing back on dominant narratives about people of color.
<b>Social Harmony</b>	<b>Critical Consciousness</b>	<b>Independent Learning</b>

# It's not about civil rights...

*chew*

## Turn and Talk (in the chat)

**I noticed... The video makes me feel...**  
**Something I am wondering is...**

# If it's not about civil rights, what is it about?

As you watch the video a second time, jot down what you notice.  
Your list might look something like this

- Povernomics is trying to help black people become competitive in society
- Assistant Secretary of US Department of Commerce
- Florida Department of Education
- Primary problem of slavery has never been addressed

Don't worry about catching everything, do your best.

# What did you notice?

# What does this have to do with teaching math?

The Nation/SPPS and our children's lives are at a crossroads.

**Status Quo**

**Change**

**Racist**

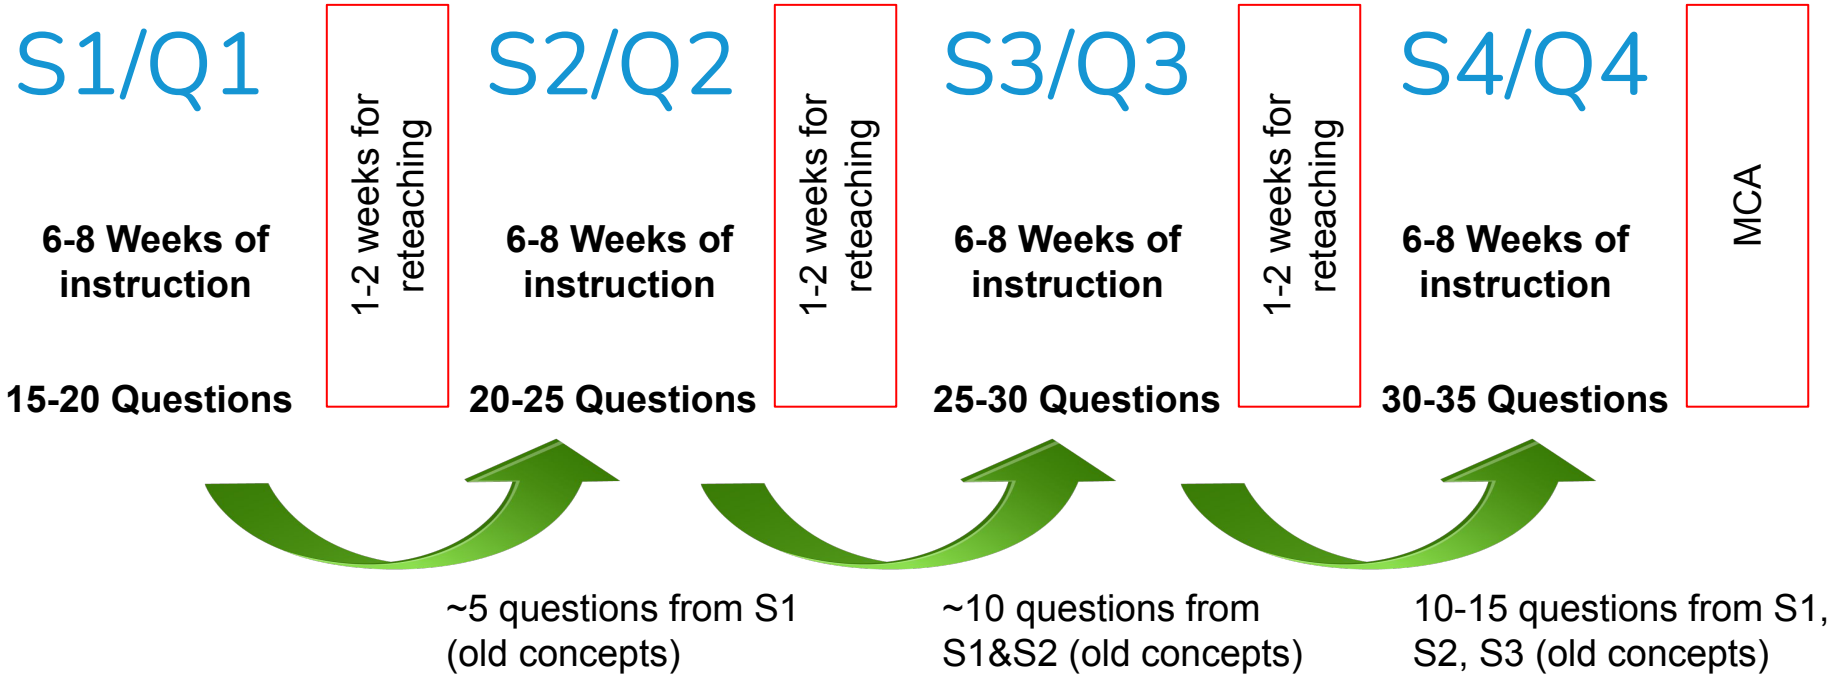

**Anti Racist**

# Take 5 minutes to stand and stretch

# Benchmark Summative Assessments

# Learning Best Practices in Teaching Mathematics

- As a department, we needed to know research best practices in mathematics at all levels
  - Due to our large size, we had to determine how to bring back what we were observing to our teachers
- Minnesota Department of Education

JUNE 2020

# Moving Forward: Mathematics Learning in the Era of COVID-19

THREE AREAS WITH SERIOUS IMPLICATIONS FOR  
EQUITABLE ACCESS TO HIGH-QUALITY MATHEMATICS TEACHING AND LEARNING

## The Most Effective Teaching Practices

It is essential to use the eight equitable and effective mathematics teaching practices advocated by NCTM in Principles to Actions (2018) regardless of whether instruction is in-person, remote, or hybrid.

- Establish mathematical goals to focus learning.
- Implement tasks that promote reasoning and problem solving.
- Use and connect mathematical representations.
- Facilitate meaningful mathematical discourse.
- Pose purposeful questions.
- Build procedural fluency from conceptual understanding.
- Support productive struggle in learning mathematics.
- Elicit and use evidence of student thinking.

Taken together, these practices support formative assessment strategies. For example, eliciting and using evidence of student thinking requires teachers to ensure all students believe that their mathematical thinking is valued. Effective implementation of this teaching practice includes posing purposeful questions, examining students' work on tasks, and observing students engaged in doing mathematics.

It is critical that we continue to support students in productive struggle and engage them in meaningful mathematical discourse that happens in and out of the classroom. Students can formulate their thoughts and then record their thinking and connect mathematical representations in a variety of ways, including using tools and devices.

# Here's what the teachers said they wanted...

## TEACHER SURVEY RESULTS

- Collaboration
- Engagement
- Creative Teaching/Instructional Methods
- Visual/Hands-On Learning/Manipulatives
- Meeting the needs of a wide range of learners

In this new time of distance learning also comes with it distance learning and collaboration for staff. Some potential options to consider with our team (based on availability) are:

- Synchronous PD during staff meetings provided by the math team around the EBP you have chosen
- Collaborative planning sessions with grade level groups or grade bands
- Virtual lesson observations as coaching sessions (non-evaluative)
- Consultations between math team members and admin or leadership teams
- Coaching support for admin as you support your staff

# DAY 2

**We noticed your  
wonderings...**

# Requirements vs. Expectations

**Statement:** “Synchronous experiences are pivotal to best practice (math) instruction and learning, for both content and SEL. This is true for in-person and remote learning.”

**Statement:** “Regardless of ‘requirements’, we recommend that sites and individual teachers set a precedent to *offer* regular synchronous experiences in their (math) classrooms, and set an *expectation* that students do their best to show up to said synchronous opportunities.”

---

[Synchronous vs Asynchronous Research](#)

Keep this in mind while we engage in today’s learning

### Quarter 3 : Unit 7 (Trigonometry): CONCEPTUAL Lesson

**Standard:** 9.3.4.2

a.) I can determine lengths and areas in right triangles, and figures containing right triangles, using sine, cosine, and tangent.

**TQE Lesson Task:**  
[Potential of the Task](#)  
**rating:**

Identify sides of the right triangles

**Learning Goal:** Students begin to notice right angles in everyday life. Students label sides of right triangles.

**Academic Language Objective:** I can use mathematical skills to understand (improve, analyze, learn about) my community.

**Materials/Tools:**  
*What tools/materials will you use to support students to engage with the task?*

[Identifying opposite, adjacent and hypotenuse](#)  
(video)

[Unit 7 Teacher Slides](#)

**How this lesson supports MLL Learners (*modify as needed based on your students MLL levels*)**

- Lesson uses images, individual, partner, and group work, repeated use of unit vocabulary, sentence stems and frames, journals, note-taking, drawing, flipped classroom homework, opportunities to speak in L1 if necessary, exit ticket

**Ref.:** [Sentence Stems and Frames](#)

**How this lesson supports Culturally Responsive Instruction (*modify as needed*)**

- Unit deals with use of neighborhood space and culminates in student created neighborhood gardens.

**Ref:** [4 R's of Instruction](#)

**[Universal Support/Differentiation:](#) (*modify as needed*)**

- See MLL supports above

# Tenth Grade Example

# Language Functions by Levels

Level 1	Level 2	Level 3	Level 4	Level 5
Give Ask State Use	Retell Share Connect	Develop Compare Contrast	Analyze Process Persuade	Evaluate Adjust Apply
I can <i>locate</i> points on a coordinate plane.	I can <i>order</i> points on a coordinate plane.	I can <i>compare</i> points on a coordinate plane.	I can <i>differentiate</i> points on a coordinate plane.	I can <i>justify</i> points on a coordinate plane.

More detailed list:

# Culturally Responsive Instruction

Our summer work and moving forward

# Bloom's Taxonomy

This is mathematics in America

**understand**

**Explain ideas or concepts**

*classify, describe, discuss, explain, identify, locate, recognize, report, select, translate*

**remember**

**Recall facts and basic concepts**

*define, duplicate, list, memorize, repeat, state*

# Bloom's Taxonomy

**create**

Produce new or original work  
*Design, assemble, construct, compose, develop, formulate, author, investigate*

**evaluate**

Justify a stand or decision  
*Appraise, analyze, defend, judge, select, support, value, critique, weigh*

**analyze**

Identify connections among ideas  
*Analyze, differentiate, organize, relate, compare, contrast, distinguish, examine, experiment, question, test*

**apply**

Use information in new situations  
*Apply, execute, implement, solve, use, demonstrate, interpret, operate, sketch*

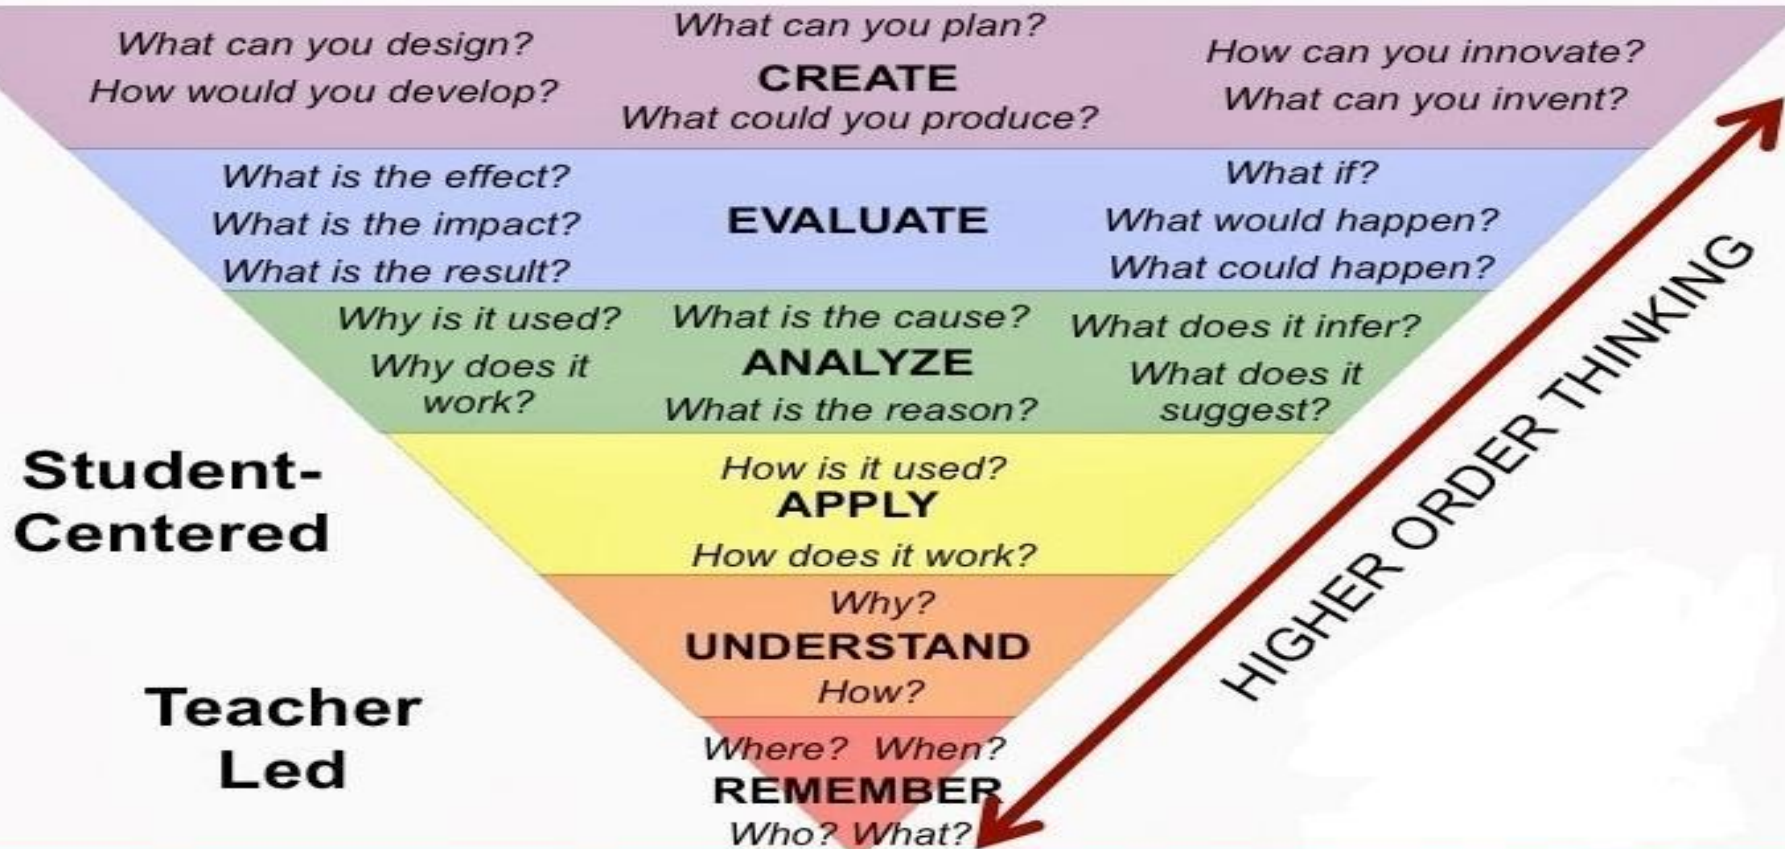

**understand**

Classify in ideas or concepts  
*Classify, describe, discuss, explain, identify, locate, recognize, report, select, state*

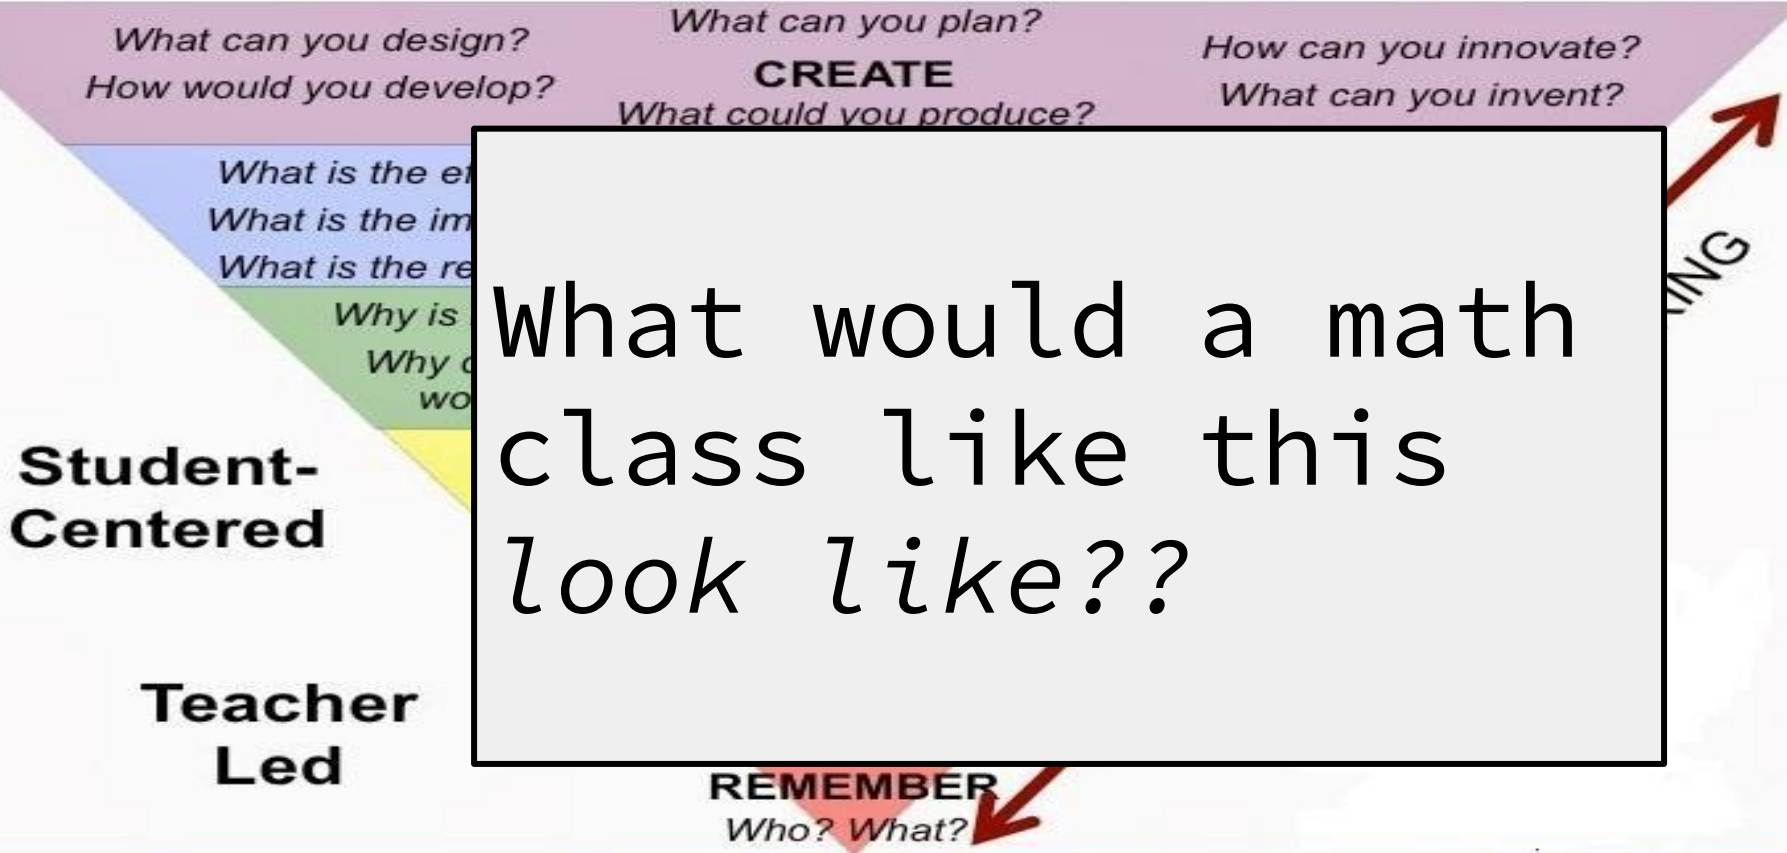

**remember**

Recall facts and basic concepts  
*Define, duplicate, list, memorize, repeat, state*

# Higher Order Thinking (Bloom's Revised Taxonomy)

# Higher Order Thinking (Bloom's Revised Taxonomy)

What would a math class like this look like??

## Read the following quote:

*“In recent years, there’s been a lot of talk about the reasons behind the low performance of many students of color, English learners, and poor students. Rather than examine school policies and teacher practices, some attribute it to a “culture of poverty” or different community values toward education. The reality is that they struggle not because of their race, language, or poverty. **They struggle because we don’t offer them sufficient opportunities in the classroom to develop the cognitive skills and habits of mind that would prepare them to take on more advanced academic tasks. That’s the achievement gap in action.**”*

(Jackson, 2011; Boykin and Noguera, 2011; Hammond, 2015)

# Zaretta Hammond

The Dependent Learner	The Independent Learner
<ul style="list-style-type: none"><li>• Is dependent to the teacher to carry most of the cognitive load of a task always</li><li>• Is unsure of how to tackle a new task</li><li>• Cannot complete a task without scaffolds</li><li>• Will sit passively and wait if stuck until teacher intervenes</li><li>• Doesn't retain information well or "doesn't get it"</li></ul>	<ul style="list-style-type: none"><li>• Relies on the teacher to carry some of the cognitive load temporarily</li><li>• Utilizes strategies and processes for tackling a new task</li><li>• Regularly attempts new tasks without scaffolds</li><li>• Has cognitive strategies for getting unstuck</li><li>• Has learned how to retrieve information from long-term memory</li></ul>
Dependent Learner Characteristics vs. Independent Learner	

# America's Reality.

“The chronic achievement gap in most American schools has created an epidemic of dependent learners unprepared to do the higher order thinking, creative problem solving and analytical reading and writing called for.”

Watch later:

# A Solution.

“Culturally responsive teaching is a powerful tool to help dependent learners develop the cognitive skills for high order thinking and independent learning.”

-Zaretta Hammond

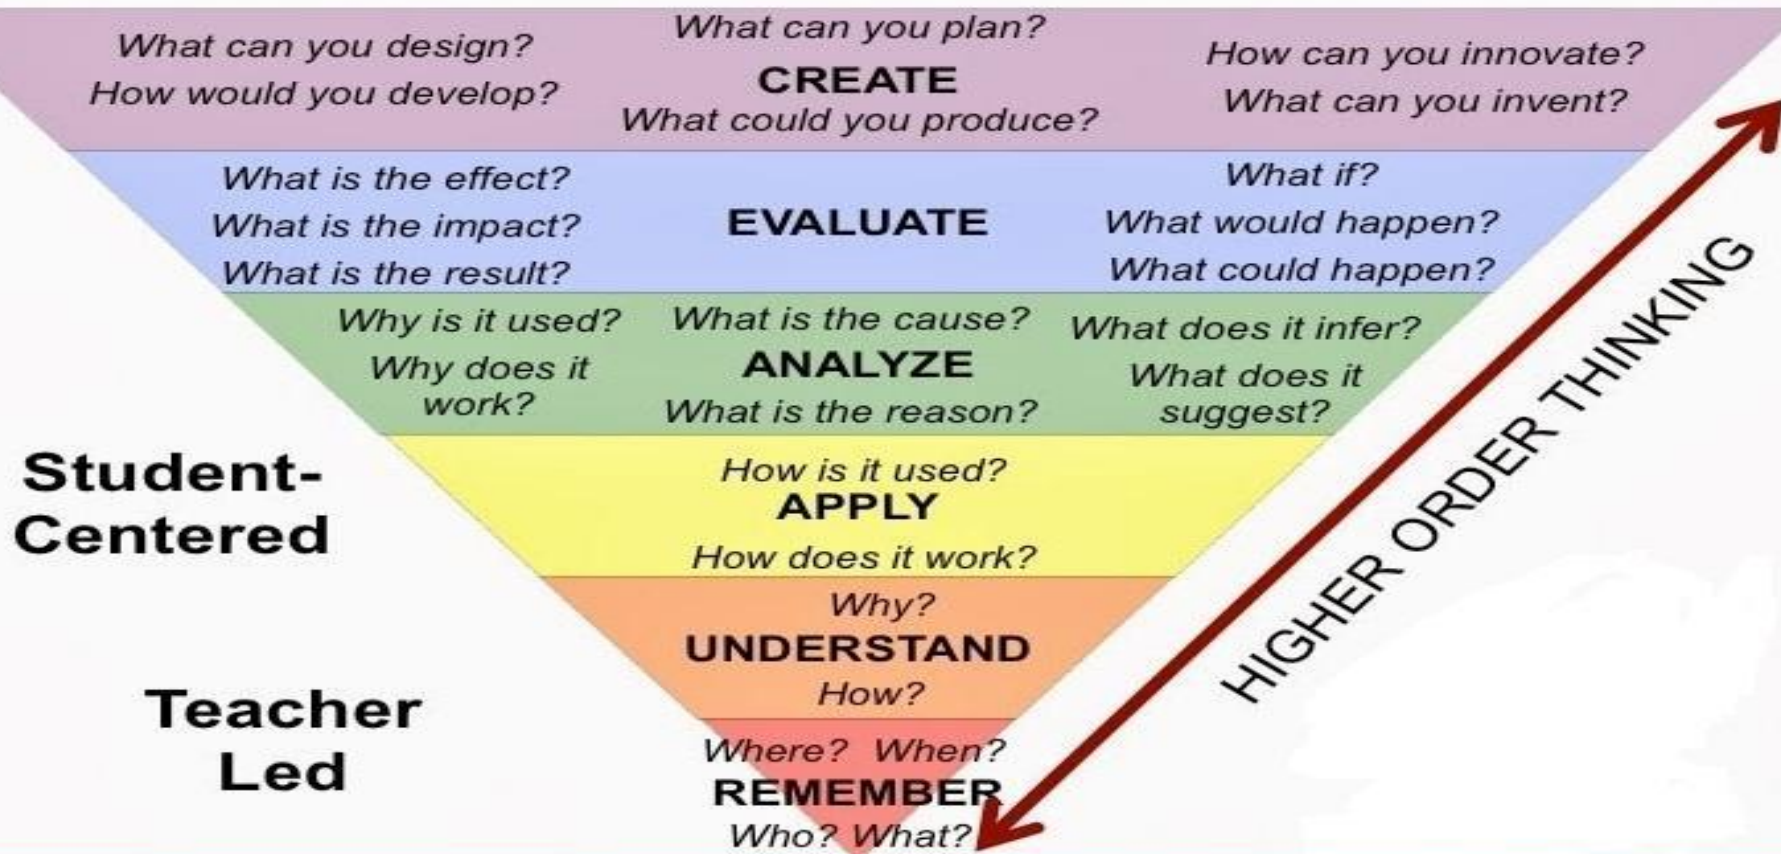

**HOW?**

1. **Blooms** (student products)
2. 4 R's
3. **Math Identities**

# Higher Order Thinking (Bloom's Revised Taxonomy)

# Summer work

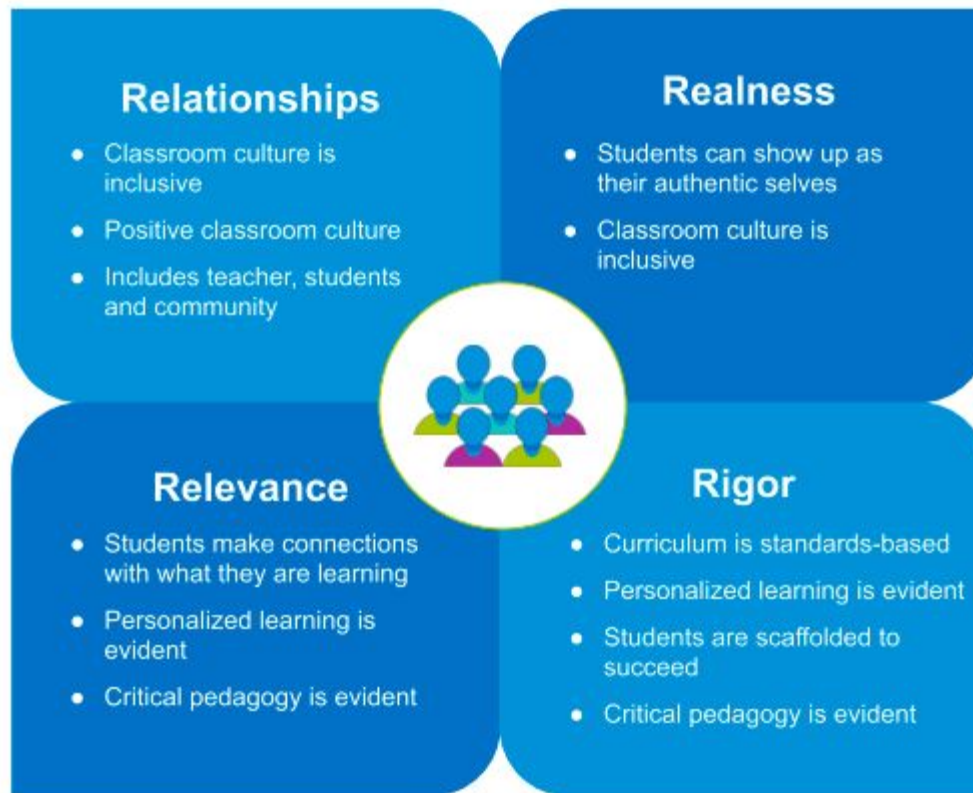

**Dependent Learners**

**Remember, Understand  
and Apply.**

**Independent Learners**

**Analyze, Evaluate and  
Create.**

# 4 R's

# Mathematics Identities

1. beliefs about one's self as a mathematics learner
2. one's perceptions of how others perceive him as a mathematics learner
3. beliefs about the nature of mathematics
4. engagement in mathematics
5. perception of self as a potential participant in mathematics

# Shifting mathematical identities

- ✓ **Model positive discourse.**
- ✓ **Get to know your students' identities.**
- ✓ **Create opportunities for positive math identities to be developed/fostered**
- ✓ **Ensure opportunities for all students to be successful.**
- ✓ **Engage all students.**

# An Example: #MathwithmeMN

# An Example: #MathwithmeMN

## Phase 1

Use the next 5 minutes to find any objects in your home / around you to recreate this pattern... Post it here ([Padlet](#))

**RECALL**

# An Example: #MathwithmeMN - Phase 2

[Math With Me MN Resources](#)

# An Example: #MathwithmeMN - Phase 2

We are going to use a class Jamboard. Click on the links by last name to follow directions for this task.

[Last names P-T](#)

[Last names U-Z](#)

[Math With Me MN Resources](#)

# Take 5 minutes to stand and stretch

# Tasks, Questions and Evidence

What to look for when observing a TQE lesson

# Explore the TQE Resources

Take some time to explore the materials created this summer. Look at:

- New landing page for the Scope & Sequence
- New Unit design
- Revised lesson plan template
- Examples of MLL supports and CRI
- Supporting slides for each unit
- How conceptual and linking tasks use Layer's of Facilitation- procedural tasks use Gradual Release

# Making Sense of the TQE Process

- Select appropriate **T**asks to support identified learning goals.
- Facilitate productive **Q**uestioning during instruction to engage students in the Mathematical Practices and Processes
- Collect and use student **E**vidence in the formative assessment process during instruction.

# Tasks

[There is] no decision teachers make that has a greater impact on students' opportunities to learn and on their perception about what mathematics is than the selection or creation of tasks with which the teacher engages students in studying mathematics.

-Glenda Lappan and Diane Briars

Being aware of both the type of thinking a task can elicit and the types of access a task can give to all students can support you to **align tasks with Learning Goals**, and to ensure that students receive opportunities for thinking and reasoning.

Finally, research has also shown that the level of the task sets the ceiling for the mathematical thinking, reasoning, and discussion that occurs throughout a lesson, and *if a task does not request a representation, explanation, or justification students typically do not produce or provide these things during a lesson.* (Boston & Wilhelm, 2015)

# The potential of a task

Take a few minutes to read through the IQA Potential of a Task Rubric we put in the chat box.

Preparing for the Mini-Lesson (Part 1 of the Math Workshop Model)		
<b>TQE Lesson Task: 1</b> <u>Potential of the Task</u> rating: <b>Problem 1:</b> $28 + 46$  <b>Problem 2:</b> $47 + 39$  Base-10 	<b>Learning Goal:</b> Modeling multi-digit addition with base ten blocks  <b>Academic Language Objective:</b>	<b>Materials/Tools:</b>  Base-10 blocks Place value mat  <u><a href="#">Slides</a></u>

[IQA Potential of a Task Rubric](#)

# Putting it into practice

- Use the rubric to determine what level each problem is
- Type your response in the chat box  
Ie.  $A=4$ ,  $B=1$ , etc

# Consider these problems...

A

Divide:

$$26 \div 4 \rightarrow \underline{\quad} \text{ R } \underline{\quad}$$

$$17 \div 5 \rightarrow \underline{\quad} \text{ R } \underline{\quad}$$

$$43 \div 6 \rightarrow \underline{\quad} \text{ R } \underline{\quad}$$

B

Write a word problem for 26 divided by 4 that results in an answer of 7. Do not use the words *around*, *estimate*, or *about*.

C

Write word problems for 26 divided by 4 where:

- The answer would need to be 7.
- The answer would need to be 6.
- You would need the exact answer.

How are the three situations the same and how are they different? How is it possible to get a different answer to the same division problem?

D

For the following problems, underline the **divisor**, circle the **dividend**, put a square around the **quotient**, and put a triangle around the **remainder**.

$$\begin{array}{r} 6 \text{ R } 2 \\ 4 \overline{)26} \end{array}$$

$$\begin{array}{r} 3 \text{ R } 2 \\ 5 \overline{)17} \end{array}$$

# Implementation of the Task Rubric

Read through the Instructional Quality Assessment

Implementation of the Task rubric

## MQI Video

Use the Implementation of the Task rubric to evaluate this lesson.

In the chat add:

This is rated a \_\_\_ because...

## The Task:

Asanya had two and one-thirds candy bars. She promised her brother that she would give him half the candy bar. How much would she have left after she gives her brother the amount she promised?

# Now let's consider this task...

## 85-29

Watch this video of a virtual class math talk. Use the Implementation of a Task rubric to rate the implementation. In the chat add:

I rated this a \_\_\_\_ because...

The image shows three examples of student work for the problem 85-29. On the left, a student named Ishmael has written "29 → 30" and "messy 11, 30". In the center, a student with a smiley face emoji has written "85-29" and shown a number line from 65 to 85 with jumps of 20 and 5, and a final jump of 4 to reach 30. On the right, a student named Christopher has written "Total jumps" and shown a number line from 65 to 85 with jumps of 5, 20, and 5, and a final jump of 4 to reach 30. Below the number lines, there are some additional calculations: "11-2 = 24 + 5 = 29".

# Reflection

How would you compare/contrast the way these two teachers implemented the task?

How did the teacher's implementation of the task impact the potential of the task?
