Ninth-Grade Course Failures	45
Ninth Grade Students with B Average GPA or Better	57
Algebra I/Integrated Math I by Grade Nine	69
Advanced Placement Course Enrollment	81
AP Exam Scores	93
Four-Year Graduation Rates	105
Attendance Indicators	118
Discipline Indicators	144
Appendix A. Data Collection Instruments	169
Appendix B. Council of the Great City Schools	179

INTRODUCTION

Over the years, the nation's large urban school districts have consistently learned from the progress of their peer districts across the country. Great City School districts that have embraced the challenge of educating America's urban children have recognized the value of benchmarking their performance and growth against the progress of others.

In 2002, the board of directors of the Council of the Great City Schools (Council) authorized what became known as the Performance Measurement and Benchmarking Project to develop and implement key performance indicators across the member school districts in operations, business services, finances, human resources, and technology. These performance indicators in operations have evolved over the years and are now reported annually by the Council's in its *Managing for Results in America's Great City Schools* series. However, one critical element was not included in these annual reports: academic performance.

In the same year, 2002, six member districts of the Council began participating in the Trial Urban District Assessment (TUDA) of the National Assessment of Educational Progress. The purpose of this participation was to gauge performance across state lines, compare progress, and ascertain what reforms seemed to be working. As of 2017, there will be 27 Council member districts participating in TUDA. Of course, not all Council member districts are eligible for TUDA, and TUDA results do not provide all the academic comparisons that the member districts would like to make.

Because of that information gap, the board of directors took the next step in authorizing the development of *Academic* Key Performance Indicators (KPIs) in October 2014. To put the board's wishes into place, teams of educators from Council member districts came together to begin drafting initial indicators in general instruction, special education, English language learners, and a number of academic cost-indicators. A lengthy list of potential indicators developed by the teams was refined and narrowed to a smaller set for piloting in 2015. Eight member districts participated in the pilot.

Based on the pilot, data-collection surveys and the indicators themselves were further refined, and all Council member districts were asked to participate in a full-scale pilot of the Academic Key Performance Indicators in 2016. The preliminary and summary results of this data collection are presented in this report. In addition, this report presents a number of different ways that member districts can analyze the data themselves by disaggregating results, showing trends, and combining variables. An electronic system is under development by which members will be able to do this on-line.

In the meantime, this report focuses on the data collection and analysis of the following Academic KPIs:

- Pre-K enrollment relative to Kindergarten enrollment
- Percent of 4th and 8th graders proficient in reading and math on NAEP
- Algebra I completion rates for credit by grade 9
- Ninth grade course failure rates at least one core course
- Ninth graders with B average (GPA) or better
- Absentee rates by grade level
- Suspension rates
- Instructional days missed per student due to suspensions
- AP participation rates
- AP-equivalent participation rates

- AP exam pass rates
- Early college enrollment
- Four-year graduation rate

Because this report is considered a pilot, the data presented should be viewed cautiously. Districts will need to review and discuss the results, fine tune their survey responses, and certify that their results are accurate. In the meantime, districts should not use these preliminary results to make decisions, but they should use the results to ask questions.

METHODOLOGY AND ANALYSIS

A. Methodology

Developing the KPIs

This pilot study sought to answer the following questions:

- 1. Is it feasible to develop Academic KPIs and collect data on them across member urban school districts?
- 2. Are comparisons between districts on academic performance measures valid and reliable?
- 3. Do districts collect and maintain requested KPI data in a way that they can retrieve and format them?
- 4. Are data collection tools clear and easy to use?
- 5. Do the results of data analysis provide valuable insights into district academic performance and student achievement?
- 6. How should the indicators be refined going forward?

To answer these questions, Council staff organized a process to develop and collect KPIs in three phases. The first phase involved the development of academic performance and cost KPIs. The second phase involved a small pilot of performance and cost KPIs in eight districts. These district included Albuquerque, Atlanta, Austin, Baltimore, Houston, Los Angeles, Kansas City (MO), and Milwaukee. The final phase assessed the viability of collecting comparable performance indicators across all Council member districts.

During the first phase, three advisory groups were formed and convened to develop the academic and cost indicators. These groups included administrators from Council member districts in the areas of curriculum and instruction, English language learners, and special education. Representatives from each area formed three homogeneous advisory groups. After several meetings, the groups submitted a list of potential KPIs on academic indicators as well as financial expenditure indicators in each area. Finally, a literature review was conducted to identify variables that predicted student outcomes and could be used to formulate KPIs, and to identify past efforts by others to benchmark performance and costs.

The indicators and costs were then reviewed by a team of general education, special education, English language learner, finance, and research department representatives to determine the feasibility of collecting comparable data across districts. The review included the relative value of each indicator, the data collection burden of the indicator, and the ability to disaggregate the data by student group (e.g., ELL, students with disabilities, ethnicity, gender, etc.). The original list of KPIs was then narrowed from 200 key performance indicators to approximately 58 cost and performance measures.

During phase two of the process, the Council team piloted the data collection instruments and the KPI definitions in 2015 with the eight member school districts listed above. Throughout the piloting process, data-collection tools and definitions were continuously revised based on feedback from participating districts and results from an initial data analysis effort.

Phase three of the pilot involved a full-scale data-collection effort to assess the viability of the indicators across a larger number of Council member districts. After revising indicator definitions and the survey instrument based on the pilot, the Council team developed two methodologies by which to collect the data. The first methodology involved an on-line survey, and the second methodology involved Excel data sheets that district staff could populate with their information. The purpose of this phase of the work was to test the potential of collecting academic performance indicators across all districts. The cost indicators

developed in phase 1 and phase 2 were deferred to future data collection efforts, while the Council devoted the work this year to the performance indicators.

The remaining sections of this report illustrate the potential use of the performance indicators across all member districts. The data are based on results from more than 50 member districts. Not all member districts completed all KPIs, but the charts and tables summarize the data from all respondents. The data reported here is for illustrative purposes only, and have not been fully verified by member districts, so the results should not be used yet to make decisions. Nonetheless, they should be used to ask questions and fine-tune the data.

B. Analysis

Organizing and Presenting the Data

The analysis presented here is divided into four sections: 1) elementary achievement indicators, 2) secondary achievement indicators, 3) attendance indicators, and 4) disciplinary indicators. In this report, we include sample charts only to illustrate the viability of the Key Performance Indicators. Not all data were presented or analyzed.

Finally, data are reported here by district using codes for each one that correspond to the codes used in the non-instructional KPIs. In the graphs, each bar represents a responding school district.

Elementary Achievement Indicators

Two elementary achievement indicators were used in the phase-three pilot. The first focused on the percentage of students annually advancing from pre-K to kindergarten, and the second focused on the percentage of fourth and eighth grade students who were proficient on the National Assessment of Educational Progress (NAEP) reading and math assessments. Data on the percent of students below basic are also reported.

The KPI team developed another KPI from the data submitted. The new KPI divided the pre-K enrollment reported on the KPI data survey by the kindergarten enrollment. This gives a preliminary proxy measure of the size of districts' pre-K program relative to kindergarten enrollment.

Figures 1.1 to 1.18 show the relationship between the two variables and provides insight into the relative availability of pre-K seats compared to kindergarten enrollment for all students and select student groups in 2013-14, 2014-15, and 2015-16.

Figures 2.1 to 2.48 show reading and mathematics percentages of fourth and eighth grade students who are *at or above proficient* and *below basic* on the National Assessment of Educational Progress (NAEP) in 2015. Figures 2.49 to 2.96 illustrate the *change* in *at or above proficient* and *below basic* rates between 2009 and 2015. The data are reported only for Trial Urban Assessment Districts (TUDA), Large City, and National public jurisdictions.

Secondary Achievement Indicators

Secondary achievement indicators selected for the full-scale pilot included:

- Ninth-Grade Course Failures and GPAs, by Subgroup
- Algebra I/Integrated Math I (or equivalent) by Grade Nine
- Advanced Placement Course Enrollment
- AP Exam Scores
- Four-Year Graduation Rates

Figures 3.1 to 3.18 show the percentage of ninth grade students by district who have failed one or more core (mathematics, science, English language arts, or social studies) courses during the ninth grade year. The indicator is based on research demonstrating the relationship between core course failures in the ninth grade and eventual high school graduation.

Figures 4.1 to 4.18 illustrate the percentage of ninth grade students with a B or better grade point average.

Figures 5.1 to 5.18 show the percentage of first time ninth grade students successfully completing Algebra I or equivalent by the end of grades seven, eight, or nine. The counts in each grade do not overlap or duplicate one another. Completion of this course has been shown to effectively predict graduation rates.

Figures 6.1 to 6.36 compare district performance on advanced placement (AP) indicators including the percent of secondary school students who took one or more AP courses and the percent of all AP exam scores by district that were three or higher, meaning that they qualified for college credit.

Figures 7.1 to 7.18 report the four year cohort graduation rates of each district.

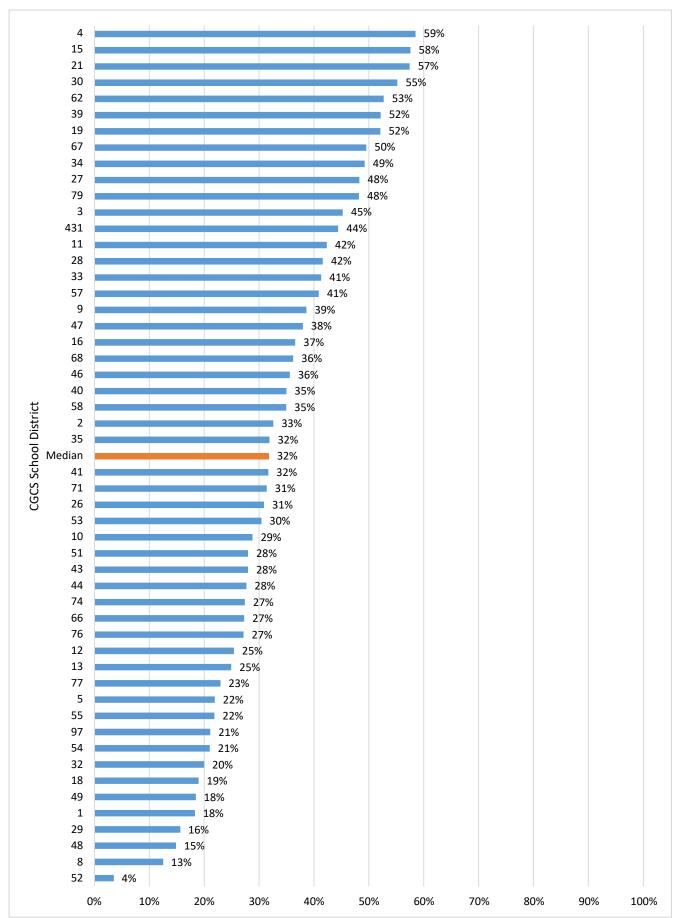

Figure 3.1. Percentage of Ninth Grade Students Who Failed One or More Core Courses, 2015-16

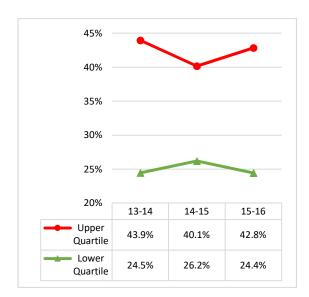

Ninth Grade Students Who Failed One or More Core Courses

Attendance Indicators

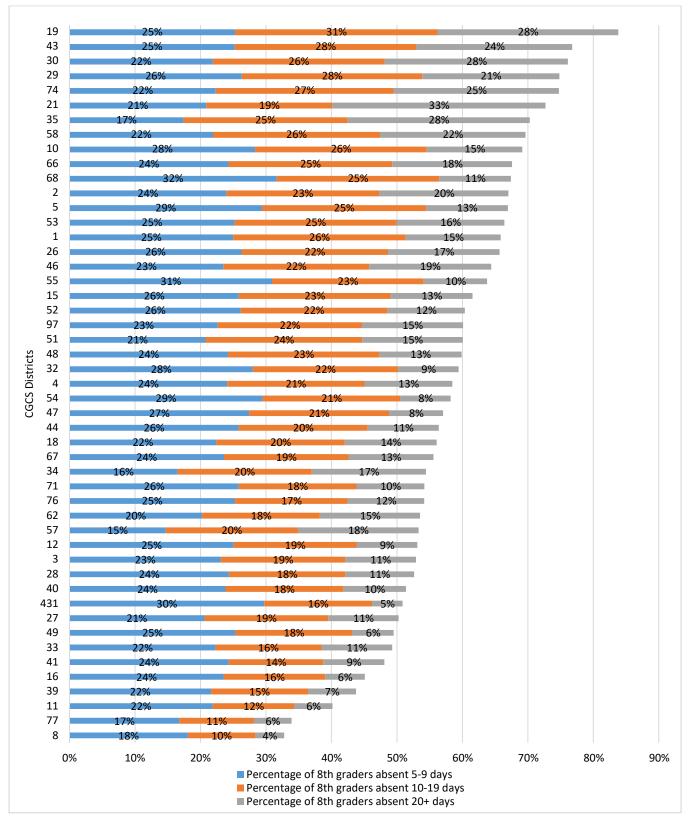

Attendance measures were collected on students in grades three, six, eight, and nine who were absent from school. Comparisons across districts are made for students who were absent cumulatively over the course of the school year for five to nine days, ten to nineteen days, and twenty or more days. The unit of analysis here is the number of students who missed school for the specified lengths of time.

Figures 8.1 through 8.24 illustrate how districts compare on their absence rates in the specified grades. The total number of days missed is divided by the total number of students enrolled during the school year at any point.

Discipline Indicators

The discipline indicators in this section focus on out-of-school suspensions. The two KPIs for discipline include the percentage of students suspended for 1 to 5 days, 6 to 10 days, 11 to 19 days, or 20 or more days in the school year, and the total number of instructional days missed due to suspension for the year.

Figures 9.1 to 9.18 show the percentage of students who were suspended out-of-school for 1 to 5 days, 6 to 10 days, 11 to 19 days, and more than 20 days cumulatively over the course of the school year. The unit of analysis is students.

Figures 10.1 to 10.18 show the number of instructional days missed per 100 students in each district. These data allow districts to compare numbers of lost instructional days independent of overall district enrollment. The unit of analysis is number of days suspended per 100 students.

APPENDIX A. DATA COLLECTION INSTRUMENTS

Academic	KPIs	Survey	1
----------	------	--------	---

Thank you for participating in this survey of Academic Key Performance Indicators (KPIs). The Council of the Great City Schools and its members have developed and piloted this collection of academic progress and achievement KPIs to help your district make better informed decisions about curriculum and instruction, and compare yourself against other major city school systems.

Survey Definitions		
Гerm		Refers To
	Survey School Year	The 2015-16 academic school year, including the summer immediately following the
		academic year
	Next School Year	The school year after the Survey School Year
	Previous School Year	The school year preceding the Survey School Year
	Survey Fiscal Year	The 2015-16 fiscal year, as defined by the district
	Next Fiscal Year	The fiscal year after the Survey Fiscal Year
	Previous Fiscal Year	The fiscal year preceding the Survey Fiscal Year
	FTE	Full-Time Equivalent staff. In this survey, FTE generally refers to district staff, but may also
		include independent contractors.
	IEP	Individualized Educational Program
	SWD	"Students with disabilities" (SWDs) refers to students who have a disability under the
		Individuals with Disabilities Education Act (IDEA) and who are eligible for a free appropriate
		public education under federal and state law. This is limited to students aged 6-21 unless
	ELL	English language learners, or students who are identified as having limited English proficience
		(LEP)
	Former ELL	A student who was identified as ELL (thus having limited English proficiency) some time in th
		prior two years but who no longer meets the state's definition of ELL (or the term used for a
		student with limited English proficiency)

Table 1. 1. Advancement from Pre-K to Kindergarten

This is the number of students who were in the pre-K program for four-year olds (districtoperated) as of the official fall count during the Previous School Year, and the number of those students who advanced to kindergarten in your district in the Survey School Year. (The second column is a subset of the first column.)

Table 1.1. Adva	incement from Pre-K to Kin	dergarten
	Total number of students enrolled in pre-K (four- year-old program) in the Previous School Year	Number of those students in the column to the left who advanced to kindergarten in your district in the Survey School Year

Table 2.1. Achievement in Algebra I/Integrated Math I (or equivalent) by Grade Nine, by Subgroup

We are looking for the student count as of the official fall count. "Completing" a course successfully refers to earning whatever is considered a passing grade by the school. If a student completes Algebra I/Integrated Math I (or the equivalent) in summer school, count this towards the Survey School Year (i.e., the summer after the eighth grade counts towards the student's eighth-grade year). The three right-hand columns are all subsets of the left-hand column.

Table 2.1 Algebra I/Int	egrated Math I Completi	on Rate for Credit by G	rade Nine, by Subgroup	
	Total number of first- time ninth-grade students in Survey School Year	Number of first-time ninth-grade students who successfully completed Algebra I / Integrated Math I (or equivalent) in grade seven	Number of first-time ninth-grade students who successfully completed Algebra I / Integrated Math I (or equivalent) in grade eight	Number of first-time ninth-grade students who successfully completed Algebra I / Integrated Math I (or equivalent) in grade nine

Table 2.3. Advanced Placement, AP-Equivalent, and Early College Participation

AP-Equivalent Courses (third column from the left) should not include AP courses. It should only include non-AP courses that are equivalent in rigor and requirements [for example, International Baccalaureate (IB) and Advanced International Certificate of Education (AICE)]. Such courses must generally include an external student assessment and certificate of achievement. Do NOT include "honors-level" courses or courses for students identified for Gifted and Talented Education (GATE), unless they meet similar requirements as outlined above.

Early college is a general description for dual enrollment, early college, or any other program (other than AP or IB) in which a student can earn college credit. All student counts should be as of the official count in the fall of the Survey School Year.

Table 2.3. Adva	nced Placement, AP-Equ	ivalent, and Early Colleg	e Participation

Table 2.5. Four- and Five-Year Graduation Rates

For the table below, enter the student graduation rate for each student subgroup as specified by the requirements of your state's four-year cohort and five-year cohort graduation rates [e.g., the National Governor's Association (NGA) Compact Rate]. These figures should be expressed as a percentage rounded to the nearest tenth, and should NOT include the percent symbol (%). For example, a rate of 75.4% should be entered as "75.4."

Table 2.5. Four- and Five-	Year Graduation Rates		
	Percent of students who graduated in Survey School Year after being in grades nine through 12 for four years, using the methodology required for your state reporting	Percent of students who graduated in Survey School Year after being in grades nine through 12 for five years, using the methodology required for your state reporting

Table 3.1. Student Absences - Grade Three

For the table below, enter the official student count for the number of third-grade students who were absent for the number of days specified (e.g., Absent 5-9 days) by student subgroup, as specified. The spans of absenteeism can be non-consecutive days of absences (i.e., the total number of days absent) throughout the Survey School Year for each individual student. Only include absences from the regular school year; do not include summer school absences. Include excused as well as unexcused absences. Do not count field trips as absences.

Table	3.1. Student Absences, by Gr	ade Level + Subgroup	o - Grade Three

APPENDIX B. COUNCIL OF THE GREAT CITY SCHOOLS

Council of the Great City Schools

The Council of the Great City Schools is a coalition of 70 of the nation's largest urban public school systems. Its board of directors is composed of the superintendent of schools and one school board member from each member city. An Executive Committee of 24 individuals, equally divided in number between superintendents and school board members, provides regular oversight of the 501(c) (3) organization. The mission of the Council is to advocate for urban public education and assist its members in the improvement of leadership and instruction. The Council provides services to its members in the areas of legislation, research, communications, curriculum and instruction, and management. The group convenes two major conferences each year; conducts research and studies on urban school conditions and trends; and operates ongoing networks of senior school district managers with responsibilities in areas such as federal programs, operations, finance, personnel, communications, research, and technology. The Council was founded in 1956 and incorporated in 1961 and has its headquarters in Washington, DC.

Chair of the Board

Darienne Driver, Superintendent Milwaukee Public Schools

Chair-elect of the Board

Lawrence Feldman, School Board Member Miami-Dade County Public Schools

Secretary/Treasurer

Eric Gordon, Chief Executive Officer Cleveland Metropolitan School District

Immediate Past Chair

Felton Williams, School Board President Long Beach Unified School District

Executive Director

Michael Casserly
